

# Repair Camera Workshop

Konica Minolta and Fuji Repair Specialists

**10% OFF!**  
**SENSOR CLEAN WITH  
THIS VOUCHER!**

Dust and debris gets inside your camera when lenses are removed and replaced. You can minimise this effect by holding the camera body upside down when taking off the lens, and if possible, only do so in a dust free atmosphere. Always attach a body cap to the camera, when storing separately from lens. Once those tell tale specks appear on your images, you know it's time to act! Telephone Dave on 01908 378088, and choose a convenient time to bring in your DSLR camera for a sensor clean. We will need the camera for about an hour, if you wish to collect straight away, there are several places in nearby Aylesbury Street to go for a coffee! If you wish to pick up later, that's OK too, we will keep it for you. We will take test shots before and after, to make sure that all specks of dust are removed.
